An excerpt from the book: *Personality assessments have been steadily growing more popular. If you have ever killed time surfing the Internet, chances are you have taken a personality quiz or two. Many corporations and organizations have begun to rely on personality evaluations as part of their employee hiring process. A popular example of these assessments is the Myers-Briggs Type Indicator (MBTI) test. The MBTI test is a questionnaire devised to assess a person's decision-making and perception. It analyzes an individual's personality framework and can be extremely helpful in determining their communication style, preferred work environment, and general interests. The Myers-Briggs test also actuates the similarities and differences between people and enables more harmonious interpersonal relationships. It was first published*

*in 1962 by psychological theorists Isabel Briggs-Myers and her mother, Katharine Cook Briggs; the MBTI test is one of the oldest personality tests in existence. The mother-daughter team began developing the test in the 1940s to measure people's cognitive preferences in how they made decisions and viewed the world. They first came up with the idea after a lengthy study of Carl Jung's proposed typological theories. Jung published the book Psychological Types in which he theorized that there are four primary functions by which people perceive the world. Myers and Briggs took Jung's theories further by creating the MBTI test. Their original goal was to help women determine which jobs during the war would be the best fit for them. Since then, the MBTI test has grown to become one of the most widely taken personality assessments in the world. In the United States alone, the MBTI test is taken nearly two and a half million times each year.
