Biology of Depressive Disorders. Part B: Subtypes of Depression and Comorbid Disorders (The Depressive Illness Series)

This volume is the fourth in a series on depressive illness. The first volume, entitled Phenomenology of Depressive Illness, is devoted to a description of depressive illness from a variety of perspectives that include that of the patient, the clinician, and the psychiatric researcher. It describes the major subtypes of depressive illness and places them in the context of the life cycle. The second volume in this series is entitled Models of Depressive Disorders: Psychological, Biological, and Genetic Perspectives. This volume describes several major models of depressive disorders, including genetic, cognitive, interpersonal, intrapsychic, and neurobiological models. The third and fourth volumes deal with the biology of affective disorders in detail. These volumes are distinguished by a triaxial approach. In Volume III the biology of affective disorders is described from the perspective of individual transmitter systems and neurophysiologic and biologic processes. In Volume IV the biology of depression is addressed from the vantage point of symptom components of depression, and similarities and differences in the biology of depression are described compared to other psychiatric disorders with clinically overlapping features such as anxiety disorders or eating disorders. The effects on biology of comorbid conditions such as anxiety, personality disorders, alcoholism, and eating disorders are reviewed.
