## **A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers** Irina Mullins

This book is not the actual Randall Munroe's book, What If?: Serious Scientific Answers to Absurd Hypothetical Questions. Do not purchase this book if you are looking for a full copy of Munroe's book.

This book includes an unofficial summary and critique of questions and scientific answers discussed in Munroe's book. It also includes additional questions and their scientific answers that are NOT part of Munroe's book, helping readers with limited scientific background get a better grasp of some basics of science behind popular science books. (This book is not intended for readers with physics or engineering scientific background.)

There are many real physical phenomena that have a certain degree of "wow factor" to them, and one does not have to destroy the Earth with a hair dryer, though, to make science interesting. This book discusses questions that were not addressed at all or were addressed only partially in Munroe's book:

Munroe's book investigates what would happen if the Earth stopped spinning. This book discusses how real winds and earthquakes affect the Earth's rotation.

Munroe's book discusses how to make a mole planet. This book discusses how gravity shapes planets and their atmospheres and how fight between gravity and dark energy affects the whole Universe.

Munroe's book discusses how people can swim in a pool of spent nuclear fuel rods and briefly mentions that radioactivity heats up the pull (without explaining the nature of radioactivity). This book discusses the nature of radioactivity and describes how radioactivity heats up our planet.

Munroe's book discusses how a person can be harmed by a supernova. This book discusses two different types of supernovae, how they can hurt our planet, and how hypernovae are more dangerous and far-reaching than supernovae.

Munroe's book discusses how to send all the water away from the Earth. This book discusses how the Earth's atmosphere actually slowly leaks into outer space.

Munroe's book discusses time travel. This book briefly discusses some ideas behind the quest to understand the nature of time.

Munroe's book calculates the power generated by a sci-fi movie's character. This book explains how you can measure your own horsepower while doing work against the Earth's gravity.

Munroe's book considers sending a submarine into the orbit. This book reminds readers that the Earth is located within the reaches of the Sun's upper atmosphere, the solar corona that streams outward in the form of the solar wind. The Earth's magnetic field prevents electrically charged particles of the solar wind from entering the vicinity of the Earth and reaching the Earth's atmosphere. This book further discusses what would happen if the submarine were sent to travel through the solar corona.

Munroe's book discusses the effects of a hypothetical situation when we all simultaneously use laser pointers to send intense, focused beams of visible light radiation toward the Moon. Considering that the Sun continuously sends visible light radiation toward the Earth and other planets of the Solar System, this book tells the readers what would happen if all the Sun's radiation were sent toward the Earth. It also briefly discusses how the solar radiation changes with time.

Munroe's book sends a person moving vertically upward away from the Earth; this book discusses how atmospheric pressure changes with altitude and how high one needs move up above the Earth in order to become an astronaut.

Munroe's book discusses flying airplanes on other planets. This book explains how airplanes fly, how space rockets fly and how artificial satellites stay in their orbits.

### **From reader reviews:**

#### **Brian Roberts:**

The particular book A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers will bring you to the new experience of reading some sort of book. The author style to spell out the idea is very unique. In the event you try to find new book to learn, this book very ideal to you. The book A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers is much recommended to you you just read. You can also get the e-book in the official web site, so you can quicker to read the book.

#### **Danny Johnson:**

A lot of people always spent all their free time to vacation or perhaps go to the outside with them family or their friend. Were you aware? Many a lot of people spent many people free time just watching TV, or playing video games all day long. In order to try to find a new activity that's look different you can read any book. It is really fun for yourself. If you enjoy the book that you simply read you can spent all day long to reading a publication. The book A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers it is very good to read. There are a lot of those who recommended this book. They were enjoying reading this book. In case you did not have enough space to bring this book you can buy typically the e-book. You can m0ore very easily to read this book through your smart phone. The price is not to cover but this book offers high quality.

#### **Arthur Coe:**

You can find this A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers by look at the bookstore or Mall. Simply viewing or reviewing it could to be your solve issue if you get difficulties for the knowledge. Kinds of this publication are various. Not only through written or printed and also can you enjoy this book through e-book. In the modern era like now, you just looking because of your mobile phone and searching what your problem. Right now, choose your current ways to get more information about your guide. It is most important to arrange yourself to make your knowledge are still upgrade. Let's try to choose proper ways for you.

#### **Nicholas Schindler:**

That e-book can make you to feel relax. This kind of book A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers was vibrant and of course has pictures on the website. As we know that book A Summary and Critical Analysis of Randall Munroe's What If Book Supplemented With More Not-So-Absurd Questions And Their Scientific Answers has many kinds or variety. Start from kids until adolescents. For example Naruto or

Investigation company Conan you can read and think you are the character on there. Therefore , not at all of book tend to be make you bored, any it can make you feel happy, fun and relax. Try to choose the best book for you personally and try to like reading in which.
